

OVERVIEW

AMC and System Service Products at OPS India

OPS India offer a wide range of services including site assessment surveys, installation service, Annual Maintenance Contracts (AMC), battery replacements and health checks for Systems, Inverters, Batteries as well as other components. Our services are offered India-wide. Solar PV systems that may be GEC based (grid connect only) or GSC based (including battery operation as a Solar UPS), are major investments. For strong system performance, it is paramount that reliable ongoing operation is achieved.

Our service and maintenance programs provide after sales service support. These programs, along with our standard warranties, ensure maximum protection of your solar PV installation.

System Health Checks: OPS India is pleased to provide a detailed Health Check of your solar PV (and where applicable) battery installation. Following our inspection a full quotation for any remedial work that may be required will be provided. In worst-case scenarios the suitable replacement system will be offered.

Equipment Relocation: Site or office relocation can be a headache, particularly when planning the relocation of power generation systems. In particular the timing of this work and ensuring that this schedule is met will always be a crucial part of the entire relocation project.

PCU Repair Services: OPS India is a recognized leader in the design and supply of single-phase and three-phase PCU systems from 5 to 500 kW. We have been repairing other systems and products for India wide where needed.

Solar Module and Battery Replacements: OPS India can provide advice and competitive offers for solar PV and battery replacement for our PCU based systems. The battery component is the final backup of energy for all GSC power systems and it's essential that battery integrity is maintained to a high standard.

Annual Maintenance Contract: We can offer a range of Annual maintenance and service contract options to maintain your system, inverters, chargers and batteries. Our support services range from an entry-level contract (routine visits only) to all-inclusive contract (guaranteed response times, parts, labour and out of hours works).

OPS India operates several mini SCADA systems that can be "internet enabled" to allow for regular and routine system monitoring and performance checking.

Actual site service visits usually incorporate environmental checks, visual inspection and electrical and mechanical testing of the system with PCU. Each of our contracts can include a battery check (if installed) that is absolutely essential in ensuring the systems up time. Discounts are available based on volume of units covered.
